SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION.

There **Are no** "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area. [Required]

B. CWA SECTION 404 DETERMINATION OF JURISDICTION.

There **Are no** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area. [Required]

2. Non-regulated waters/wetlands (check if applicable):¹

Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined to be not jurisdictional.

Explain: **Wetlands 1 & 2 are both small isolated micro-depressions in an upland area with large cottonwood trees.**

These wetlands have no overland flow connection to any flowing water of the U.S., and therefore are isolated.

SECTION III: CWA ANALYSIS

E. ISOLATED [INTERSTATE OR INTRA-STATE] WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE, INCLUDING ANY SUCH WATERS (CHECK ALL THAT APPLY):²

 - Prior to the Jan 2001 Supreme Court decision in "SWANCC," the review area would have been regulated based solely on the "Migratory Bird Rule" (MBR).
- Waters do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction. Explain: .
- Other: (explain, if not covered above): .

2. Non-regulated waters/wetlands (check if applicable):¹

- Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined to be not jurisdictional. Explain: **Three wetlands were identified on the subject parcel. There is a watershed divide north of the parcel, so there is no connection between the on-site wetlands and the area north of Dundee Road. It was confirmed in the field that flow from any of the wetlands to the parcel to the north does not occur. Based on review of topographic contours, flow to the south/west was explored. Wetland 1 is isolated in the NW portion of the site, no flow to the south. Wetland 2 is along the southern border. Surface flow to the west clearly does not occur based on the field visit. Wetland 2 generally grades to the east where it stops at the road embankment. No connection was observed to the roadway drainage system. Wetland 3 has a culvert entering it from the road. This culvert is located in a concave section of roadway and inlets along the road at this location appear to indicate that roadway drainage discharges to the wetland through the inlets and culvert. Wetland 3 has no surface or subsurface connection. None of the 3 wetlands have an ecological connection, all are isolated to the site and separated from any nearby resources..**
