LRC-2018-598 Upland Drainage Feature	This feature is a narrow, shallow ditch that was created in upland on a site that was previously a refinery and was later stripped to remove contaminants. The ditch is approximately 1,075 linear feet and flows into the I&M Canal, an (a)(1) water. The flow comes from seeps that come out of a bluff east of the property on the other side of the railroad tracks. Water then flows through a ditch located outside of the property and crosses the railroad tracks through a culvert before reaching the upland drainage feature until it ends into the I&M Canal. The characteristics of the upland drainage feature change about midway. The upstream section consists of a small vegetated channel with intermittent flow but with no distinct ordinary high water mark or bed and banks. The last 500 linear feet consist of a channel filled with rocks, with no distinct ordinary high water mark or bed and banks, and with only stormwater flow at the surface. It appears the intermittent flow from upstream disappears under the rocks.

Area 1	Area 1 is pitched to the east and ponded against the RR tracks. The SPOE shows connection to the west, but this was cut off by a 4-5 foot high ComEd access road, such that water never leaves the site. (Outside ROW)
Area 2	Area 2 is a small shallow isolated reed-cannary grass wetland that the SPOE shows jumping the RR tracks, and still is more than 4000 feet from a tributary, so no way water could ever make it. (Outside ROW)
Area 3	Area 3 is a cattail wetland in the ComEd ROW that the SPOE shows jumping the RR tracks, and still is more than 4000 feet from a tributary, so no way water could ever make it. (Outside ROW)
Area 4	Area 4 is a cattail wetland in the ComEd ROW that is pitched to the RR tracks; and the SPOE shows it jumping the RR tracks, and cutting through homes, so no way water could ever make it.
Area 9	Area 9 is an emergent wetland in the ComEd ROW pitched to the east up against the RR tracks that are 6 feet higher; the SPOE shows water jumping the RR tracks, and still is more than 4000 feet from a tributary, so no way water could ever make it.
