B. ADDITIONAL COMMENTS TO SUPPORT JD: All wetlands were previously determined to be isolated. This area was previously farmed and then partially graded. The South Branch of the Kishwaukee River is north of the Wetland 3, and on aerial photographs there is a curved treeline that looks as though it may connect this wetland to the river. A site visit proved this treeline to be an elevated hilly formation, and not a depressional drainage.

- Area(s) are geographically isolated. .
- Area(s) do not have a hydrologic nexus. No known connection to surface water or drain tiles..
- Area(s) do not have an ecological nexus. area not ecologically significant, abandoned farmland and partially graded for a commercial development, it is adjacent to subdivision.
- Area(s) do not have evidence of a subsurface flow connection to a jurisdictional water. .
- Area(s) do not have evidence of surface overland sheet flow. no evidence of a swale nor drain tile.
- Area(s) are not located within the flood plain. Nearest floodplain is associated with the South Branch of the Kishwaukee River.
